 Should Fix:

Avoid landing page redirects

Your page has 3 redirects. Redirects introduce additional delays before the page can be loaded.

[Avoid landing page redirects](#) for the following chain of redirected URLs.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 1 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

[Optimize CSS Delivery](#) of the following:

- https://www.blogger.com/static/v1/widgets/1171200566-widget_css_mobile_2_bundle.css

Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- <https://www.googletagservices.com/activeview/js/current/osd.js?cb=%2Fr20100101> (50 minutes)
- https://www.googletagservices.com/activeview/js/current/osd_listener.js?cache=r20110914 (50 minutes)
- <https://pagead2.googlesyndication.com/pagead/js/adsbygoogle.js> (60 minutes)

Reduce server response time

In our test, your server responded in 0.38 seconds.

There are many factors that can slow down your server response time. [Please read our](#)

[recommendations](#) to learn how you can monitor and measure where your server is spending the most time.

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

[Minify JavaScript](#) for the following resources to reduce their size by 623B (31% reduction).

- Minifying <https://www.cricfrog.me/js/cookienotice.js> could save 623B (31% reduction) after compression.

Optimize images

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 12.9KiB (32% reduction).

Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target `Ok` is close to 1 other tap targets final.
